

# Assignment 04

Due Tuesday, June 11

D0

Start to think about a course of inquiry that you will follow from Midterm until the end of the semester. Remember that the point of the course is to explore algorithms through fabrication. A proposal for this inquiry should address the following:

Algorithms/Code

Materials

Process

Form

Behavior

At this point, you should be searching the internet for interesting projects you can emulate or be inspired by. Search terms like digital fabrication, computational design, generative design, algorithmic design, etc. For now, come up with a few ideas. I will speak with you individually about these ideas and will help you find the best course of action.

## DELIVERABLES

A powerpoint presentation outlining your project idea. Include examples of previous work, inspirational projects, etc.
